A B O U T M E

Hello, I'm Emir Tetik. As a **Frontend Developer** in the **JavaScript** ecosystem, I develop scalable and high-performance mobile and web applications using technologies like **React**, **Next.js**, **React Native**, and **Nest.js**. My stronger area is **Frontend**, but I am also improving myself in **Backend** through my projects. With over **10,000** hours of coding experience, I have contributed to **50** different projects on **GitHub**. I have a project published on the **App Store** and **Play Store** using **React Native**. Also, I developed an application to the beta stage and sold it to a software company in exchange for equity, and the project is still being actively developed.

I have strong expertise in **Frontend** and **Backend** development, clean and sustainable coding practices, and **API** integrations. My motivation comes from my interest in new technologies, creating innovative projects, and constantly learning.

In the past year, I have worked intensively on two projects using **React Native**, and I believe the experience I gained can add value to your company.

If you ask me what I'm currently working on, I am trying to promote my **Tetrig** project to cafes. At the same time, I am studying **AI SaaS** systems and working on **AI** models like **Deepseek**, **ChatGPT**, and **Gemini**. Additionally, I'm exploring different technologies by getting into **Flutter**.

P R O J E C T S

Portfolio - 2025

<https://emir-tetik.vercel.app/>

- I integrated **Deepseek** with **OpenRouter** in my portfolio site. **OpenRouter** is a technology that makes using artificial intelligence free and easy, but it has some limitations. For more flexibility, you can download **AI** models to your server with **Ollama** and train and customize your own **AI** using **RAG**.
- **Next.js**, **RESTful API**, and **i18n** played an important role in my project.

Tetrig - 2024 - 2025

<https://tetrig.com/>

- By releasing the **subscription-based** application on the **App Store** and **Play Store**, I gained valuable experience by putting a lot of effort into every stage and personally managing the process from start to finish. My goal is to further develop the **Tetrig** project.
- **React Native**, **NestJS**, **PostgreSQL**, **GraphQL**, **RESTful API**, **RTK Query**, and **CI/CD** (Continuous Integration/Continuous Delivery) played an important role in my project.

Taxigig - 2023

- **Taxigig** is an innovative startup that I presented as a beta to **Wibesoft** and developed together by transferring a part of the project rights.
- I built it using technologies like **WebSocket**, **React Native**, **NestJS**, **PostgreSQL**, **i18next**, **Push Notifications**, and **Tanstack Query**.

Bileton - (Bootcamp) - 2023 - 2024

<https://bileton.vercel.app/>

- **Bileton** is a bootcamp project. It is a ticket sales website developed under my **leadership**. It includes **Frontend**, **Backend**, and **Admin Panel**. Through this project, I learned the importance of working efficiently as a **team** and guiding people in the right way.
- We completed it using **TypeScript**, **React**, **Node.js**, **Express.js**, and other modern technologies.

Alieswolf - (Freelancer) - 2023- 2023

<https://www.alieswolf.com/>

- For the **Alieswolf** website, I worked with a designer to develop an **SEO-friendly** user interface. I used **NextJS** and **Bootstrap**. For the payment method, we used **iyzico**.
- At the customer's request, the site will be updated with a new revision this year to make it even better.

EU Burs - (Freelancer) - 2023 - 2023

<https://euburs.eu/>

- I improved the user experience by fixing **card**, **slider**, and various design issues. I used **HTML**, **CSS**, and **Bootstrap** to make the page look more modern and smooth. I developed it according to responsive design principles.

E D U C A T I O N

Kocaeli Üniversitesi

Economics (English) | January 15, 2023

- I completed my Bachelor's degree with an average of **2.94/4**.

Techcareer

Mid level Front-End Bootcamp | 2023 - 2024

- Under the guidance of **Senior Software Developer Çağatay Yıldız**, I developed my Frontend skills, such as **JavaScript** and **React**. I worked as the team leader in the final project.

W O R K E X P E R I E N C E

Voxnet Hosting | 2022 - 2023 | Kocaeli

Stajyer

- At **Voxnet Hosting**, I learned about server operations, the structure of the **web**, **deployment** processes, and how a browser **request** is processed on the server. This helped me build a strong foundation. This knowledge greatly contributed to developing products from scratch and made it easier for me to learn software development.

C E R T I F I C A T I O N S

- **BTK Akademi** | Versiyon Kontrolleri: Git ve Github
- **Turkcell** | Geleceği yazarlar React 301
- **FreeCodeCamp** | FrontEnd Development Libraries
- **Patika Dev** | React Native
- **Beyond the Basics**: Mid-Level Front-End Bootcamp
